MACRO DRIVERS

S&P 500: It must be that time of year when Congress returns to session, the annual budget impasse heats-up, a government shutdown is threatened and the debt ceiling rancor rattles the markets. It might however be significantly more dangerous and volatile as this time we additionally overlay;"TAPER" potentially being implemented with the next FOMC meeting, EU facing a potential destabilizing election in Germany, the Asian Crisis worsening and broadening with its attendant RISK-Off deleveraging, Q3 Earnings Pre-Announcements being made and the fear of a potential US recession entering the media lexicon.

MACRO TRIGGERS

US Stock Indices are traditionally strong heading into the Labor Day weekend. We can expect increased volatility as each critical event date is approached throughout September. The market is ripe for an expected financial or geo-political shock. The charts are errily similar to 1987 with 6 Hindenburg Omens now on the board.

DISCLAIMER: Inter-Issue UPDATES is not a Trade Advisory Service. This is a Technical Analysis service supplementing the monthly analysis found in our monthly publications. The point of the Updates is to provide a more fluid, stable and up-to-date analysis - more so than could be delivered in just a monthly publication alone. TRIGGER\$ & TARGETS are markers that can be used in measuring / determining trend movement and changes. **They are Not trading signals or calls.**

The market has dropped lower since last update and the current weekly bar is now significant and red. The recent drop has moved the market to the red-dashed s/r in the middle of the red wedge pattern. Supports on the daily are just below the current market and we are watching to see if bounces or breaks from here. The W%R has also dropped and now sits at the edge of the blue s/r zone and the trend support on the indicator... this too is a significant technical point and a break or bounce of the indicator corresponds with the p/t. Both conditions offer TC.

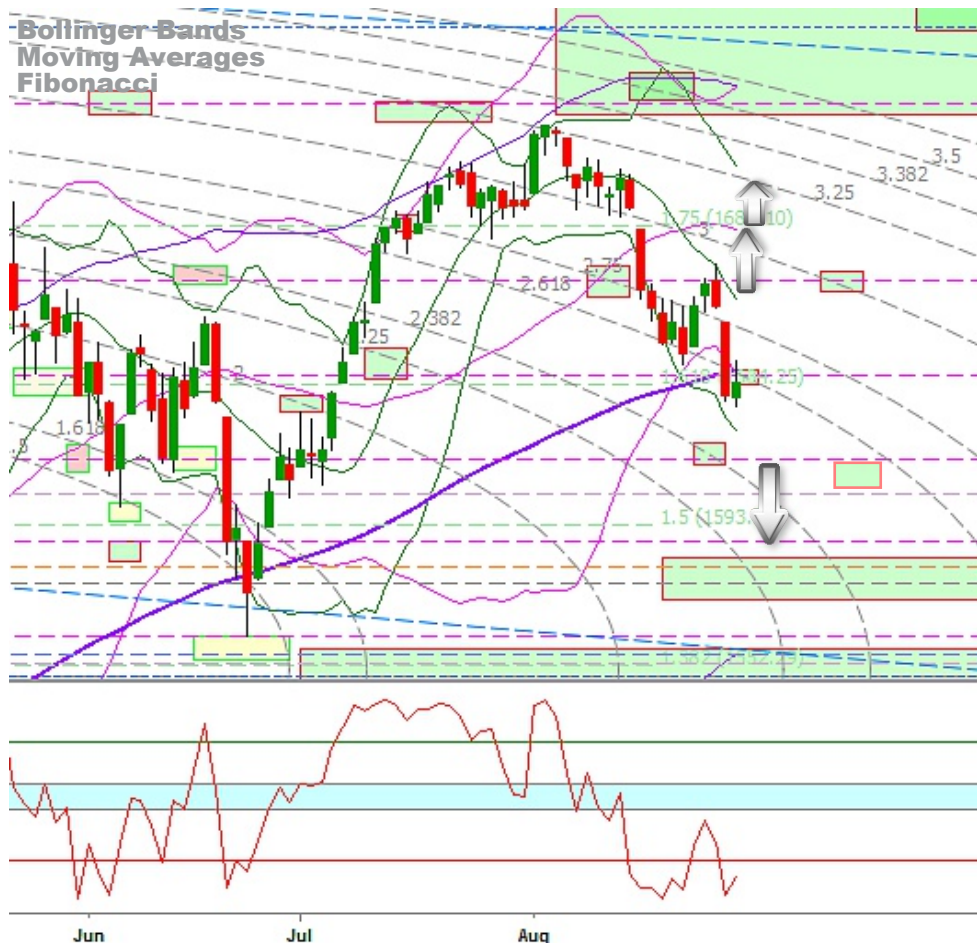

S&P 500 DAILY

MATA DRIVERS

MOVING AVERAGE	34ma	1,678.97	1,692.22 Fib circle
MOVING AVERAGE	13ma	1,659.24	1,678.97 34ma
SUPPORT / RESISTANCE	grey-dashed	1,617.20	1,578.04 light red-dash s/r

The daily shows the latest moves from the market since last update have dropped it to the next HPTZ indicated. The purple ma & BB added to the chart above is the 100ma & 2std dev. BB's. We can see the market has found support from the 100ma previously – with some throw-over or spike. The s/r's that can be seen below the market allow the same scenario to play out; if these are broken however the odds increase that the market is headed to the next lower supports and HPTZ. The W%R is below the -80 level and indicates there still may be negative pressure on the market. It appears to have turned, and the weakness may be backing off, but until the indicator actually breaks back over the -80 level it is risky to assume an up move is comng.

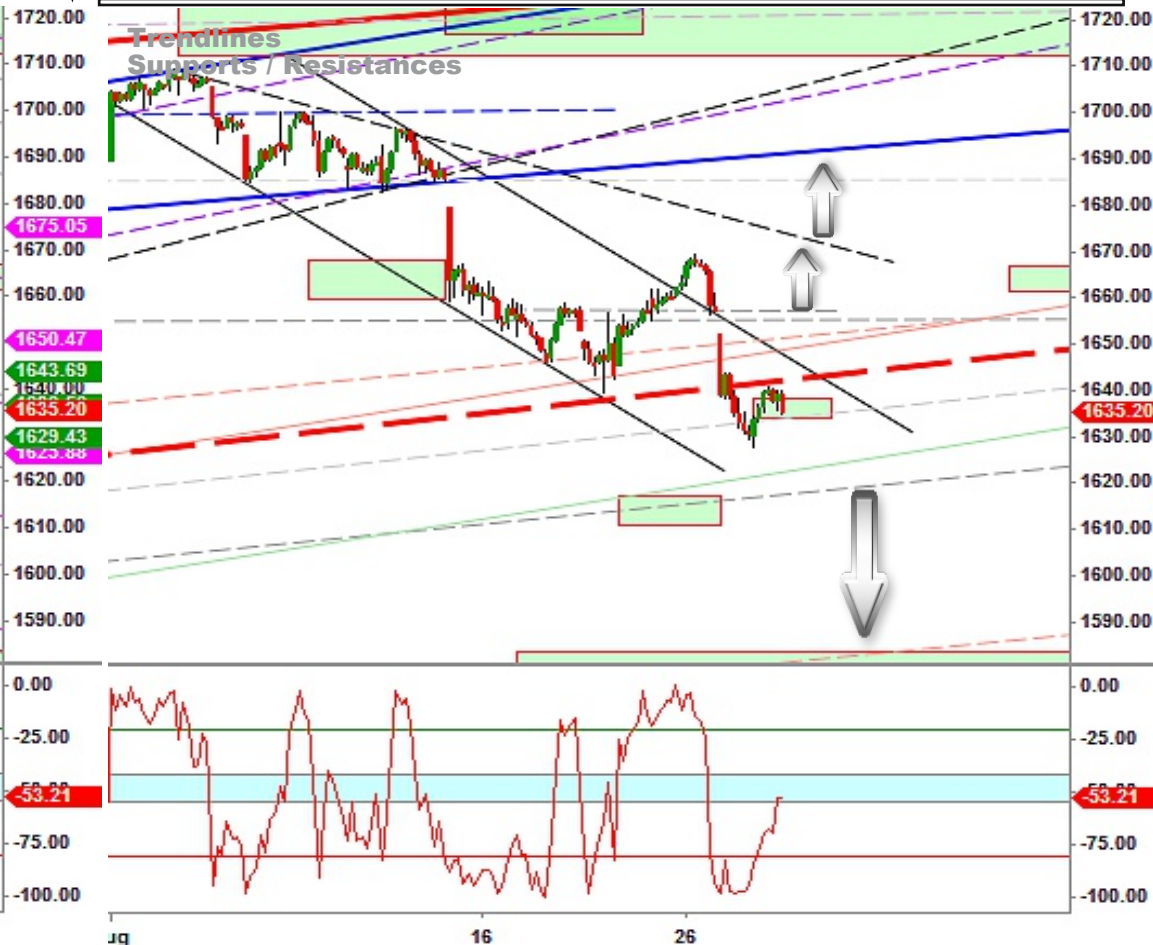

S&P 500 60 MIN

MATA DRIVERS

SUPPORT / RESISTANCE	grey-dashed	1,657.14	1,692.22 Fib circle
MOVING AVERAGE	13ma	1,636.56	1,673.15 Fib circle
SUPPORT / RESISTANCE	grey-dashed	1,617.20	1,578.04 light red-dash s/r

On the hourly we see the market initially dropped quickly and past the HPTZ; it then bounces and moves over to it. Currently sitting on several supports (Fib level, Fib circle, 13ma and a trend s/r), these offer TC if broken through. Two more s/r's can be seen below the market and waiting for these to be cleared for a TC offers less risk. The W%R is lifting from the -80 level and with room left to go to the upper extremes suggests the market may have a lift in the immediate future. The blue s/r zone on the indicator should be moved through first (TC) for those looking for less risk. Above the market we can also see several s/r's and clearing these offers TC's if the market start to bounce from here. IF current supports hold and we get a bounce from the nearby s/r's, the market could move to new highs.

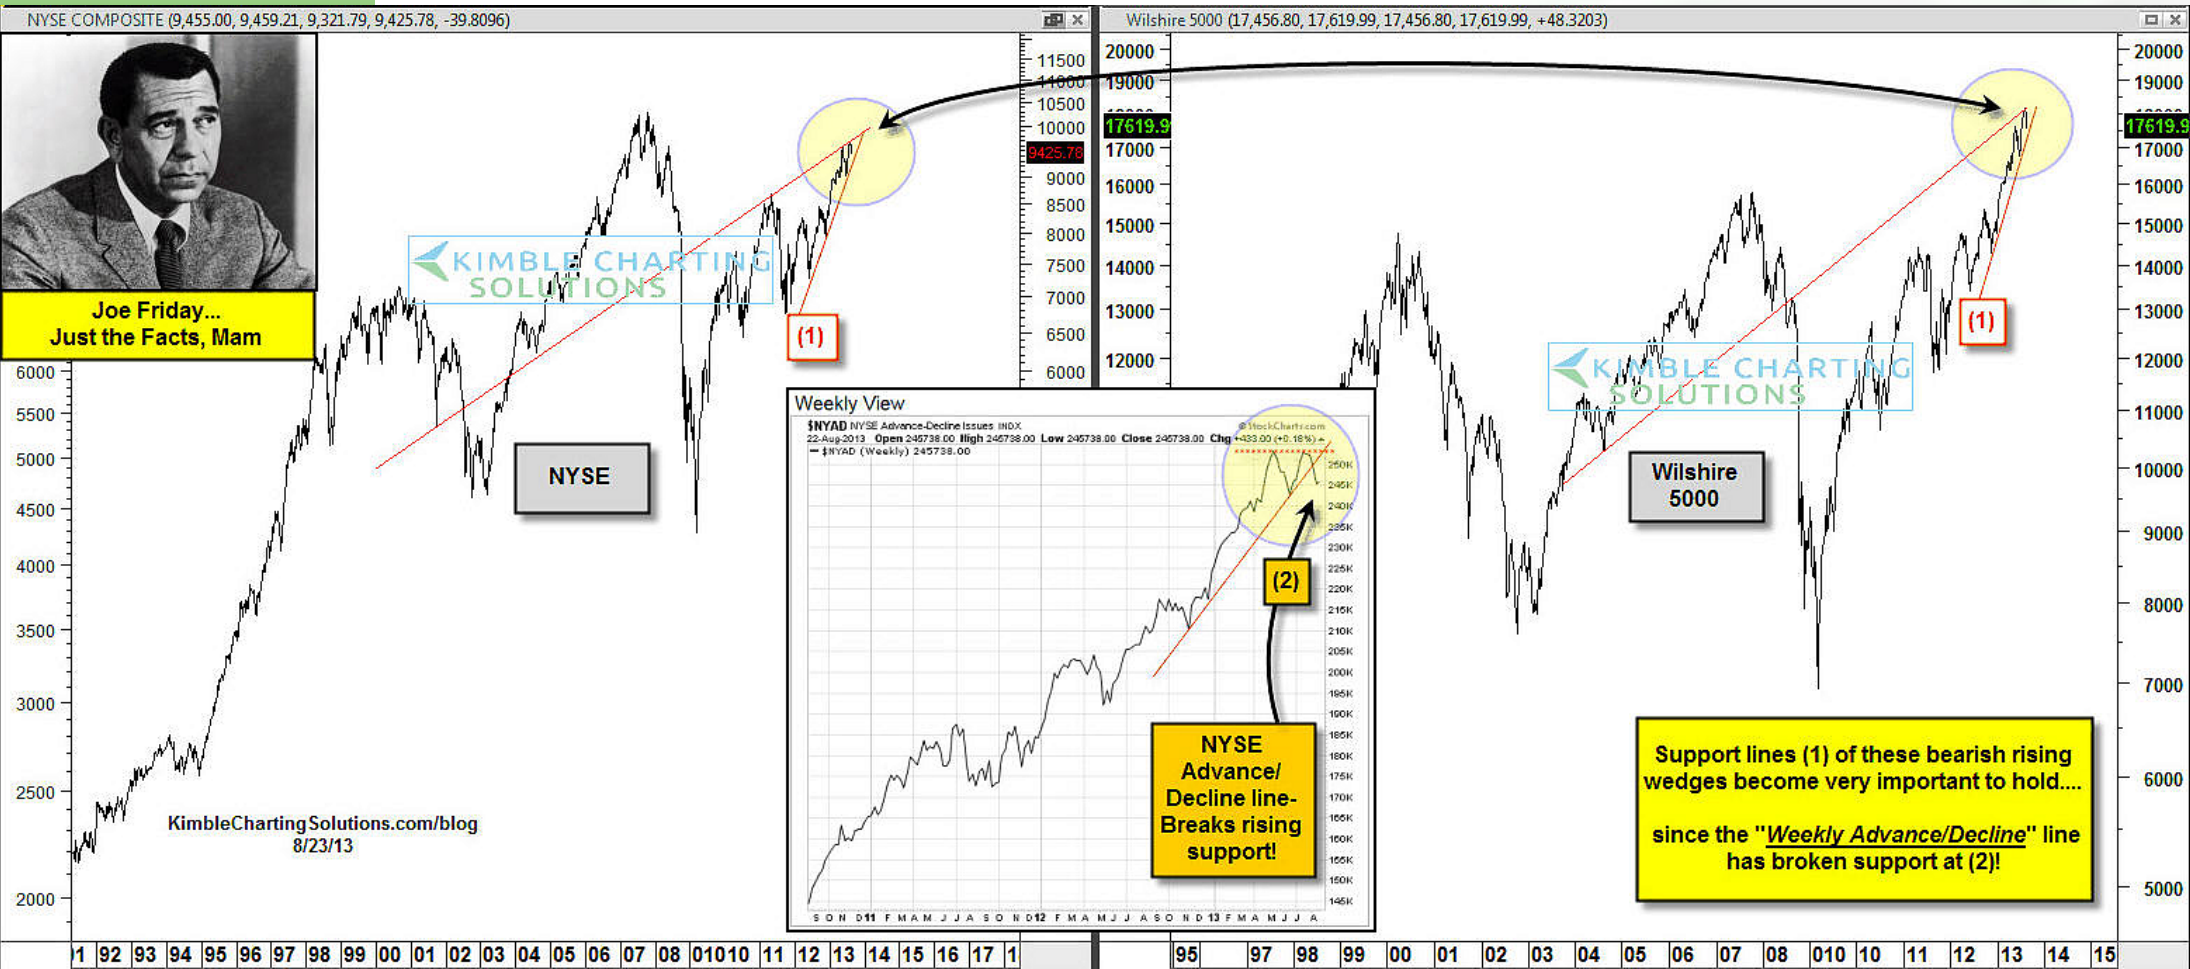

1. Consumers are carrying more debt than they did in 2007. (Consumer credit - ignoring mortgages - is up to \$2.8 trillion.. In 2007, at the height of the “credit bubble,” it was just \$2.5 trillion.)
2. Corporations are carrying more debt than they did in 2007. (U.S. businesses owe \$12.9 trillion - compared with \$11 trillion in 2007.)
3. The Federal government is carrying 60% more debt than it did in 2007.
4. Cities and States are carrying more debt than they did in 2007.
5. Interest rates have jumped by 80% in the last three months.
6. The economy is clearly in recession, as retailer after retailer reports horrific results.
7. Stocks are as overvalued as they were in 1929, 2000, and 2007.
8. China is experiencing a real estate collapse.
9. Japan is experiencing a cultural/economic/societal collapse.
10. The Middle East is awash in blood.
11. The European Union is held together by lies, delusion and false promises.

What could possibly go wrong?

SEPTEMBER WILL BE A DANGEROUS MONTH

TECHNICAL

MARKET ANALYSIS

TA Glossary (list of TA abbreviations)

HPTZ	High Probability Target Zone(s)
Fib	Fibonacci
ma	Moving Average
p/t	Price / Time Graph
s/r	Support & Resistance
TA	Technical Analysis
TC	Trigger Consideration
13ma & BB	Green
34ma & BB	Pink

UNDERSTANDING THE ANALYSIS

You will notice that 2 charts are given for the Daily and Hourly time frames. Each chart is identical but shows different technical studies. This is done so that the charts are easier to read and less cluttered. Both charts should be taken in to consideration. Targets given are located in the exact same position on each chart and you can see which tools are aligning across both perspectives.

1 Instrument / Market

2 Time Scale

3 Trend

General overall trend based on the technical analysis. Although a market may have had a few down days, it may still be in an up-trend - technical parameters determine direction, i.e. channel.

4 Driver

The market that is having the most influence on, and has a relationship with, the current market.

5 Trigger & HPTZ

Green and Red arrows divide the chart from top and bottom representing the TA above and below the current market. Triggers are the technical tools that need to be violated to reach the HPTZ location.

6 HPTZ

Green boxes are identified target locations. Red boxes are missed targets. Yellow boxes are targets hit. Box size is determined by (1) the time scale the target was placed on - weekly target viewed on hourly chart appears large (2) not all technical tools cross at an exact point but in a general area.

7 Arrows

The base of the arrow sits at a significant technical tool that is a trigger consideration. The arrow points to the next significant technical and is where the market should move to once the initial trigger at the base of the arrow is crossed. These identify the significant technical triggers and where the market is likely to move to once crossed.

8 W%R Indicator

Consistent indicator used with HPTZ and technical triggers. Aids in identifying trends and pivots.

9 Analysis

What occurred since last update; significant technicals, triggers and targets. Also: education & explanation of the TA and methods, using targets and technical triggers as the backbone of a personal trading strategy.

Methodology Performance

as of Friday March 5th, 2013

TRIGGER\$ Updates are part of a Trading Methodology that uses the identification of High Probability Target Zones (HPTZ).

These targets are derived from the assimilation of several Technical tools and methods.

Through the application of the tools to determine HPTZ, they also set up trigger considerations for potential entry and exit placement.

Our Updates give the HPTZ that we have found as well as the most obvious technical triggers that have set up. There are usually several trigger considerations for each HPTZ and the traders own risk tolerances and trading strategy must decide for themselves which are appropriate. As noted in our disclaimer, this is not a trade advisory service. The updates outline and use a methodology *that can be used as the base for an individuals personal trading strategy.*

The trading methodology entails identifying the HPTZ **both above and below** the current market position. While we generally have a bias on market direction, we are not infallible. Identifying the HPTZ on either side of the market, and using the technical tools as trigger considerations, the trader eliminates all bias and psychological pitfalls and trades what the market actually does, as opposed to what is believed to potentially occur.

This sets up a purely technical trading system. Regardless of market

direction, the trader has a plan and method for successfully navigating the market.

You will note throughout the updates we post that the Methodology remains constant. That is, it does not change, shift or modify depending on market conditions. **Regardless of trending or non-trending markets, the methodology is applicable in all situations.**

While the methodology has been in development for several years, it is only recently that we have started to keep a track record of its progress. Through the publication of these updates, we have a real-time record of the success or failure of the method and identification of HPTZ, or a proof of concept. In July of 2012 we expanded our updates to include several markets and it is from this point that we have started collecting data from our methodology. For the moment, the sampling size is admittedly small. However it grows monthly and should soon enough begin to establish an acceptable statistic.

As we locate HPTZ on either side of the market, only those that are activated are included in the calculations. HPTZ are activated when the market makes a move in that direction (i.e. new wave), exceeding the current market boundaries (i.e. channels, pattern s/r's etc.). HPTZ identify targets for the next wave. If the next wave becomes apparent and moves outside current boundaries but does not make it to the HPTZ, then it is a miss.

Hits on price level, but misses at the exact location (time) are only counted as a hit if the call could reasonably be considered "close". That the market at some point reaches the price level is not enough to be considered as a hit – the p/t must "just miss" the time target to be counted as a hit on price but miss on time.

July 2012–Mar 1st 2013 HPTZ Forecast Multiple Markets Combined Totals	Totals / % All Markets
Total # of HPTZ\$ Forecasted	391
# Targets Hit: Both Price & Time*	332
# Targets Hit: Price Level Only*	26
TOTAL # ALL TARGETS HIT**	358
# Targets Missed	33
Hit % : Both Price & Time Only*	85%
HIT%: ALL TARGETS HIT**	92%

July 2012–Mar 1st 2013 HPTZ Forecast	SPX	USD	EUR/JPY	EUR/USD	VIX	GOLD	OIL
Total # of HPTZ\$ Forecasted	46	76	76	67	38	48	40
# Targets Hit: Both Price & Time*	39	64	61	58	34	40	36
# Targets Hit: Price Level Only*	1	5	9	4	2	4	1
Total # All Targets Hit**	40	69	70	62	36	44	37
# Targets Missed	6	7	6	5	2	4	3

* **Both Price & Time:** exact location for both price & time was achieved

* **Price Level Only:** price level was reached, but occurred outside of specified time frame. Only those price levels reached where the time element could be reasonable counted as "close" count as a Hit.

** **Total Combined** number of the Price & Time Targets Hit and the Price Level Only Targets Hit.
